

If you do not have “Version 2” of the DVD which accompanies this textbook, the following steps will be required once you reach page 8-20. If you have not started the book yet, you can avoid this problem by downloading the updated project starter file from www.SDCpublications.com.

1. Create a new project File; **Application Menu** → **New** → **Project**.
2. Select **Architectural Template** (see image to right)
3. Leaving the new project file open, also **Open** your Law Office project.
4. In your Law Office project; Select **Manage** → **Transfer Project Standards**.
5. Click the **Check None** button (see image to right).
6. Check the **Railing Types**; this should be the only item checked.
7. Click **OK**.
8. Click the **Overwrite** button so the Types in the new project will replace the Types in your [old] Law Office project (see image to the right).
9. If you have already created *the Guardrail – Pipe with Stringer* railing type:
 - a. Switch the two railings back to **Guardrail – Pipe** on level 2.
 - b. **Delete** the *Guardrail – Pipe with Railing* from the *Families* section of the *Project Browser*.
10. Finally, load the following family:
Railings\Supports**Support - Metal - Circular.rfa**

You can now continue in the book, on page 8-20, starting with Step 28.

We apologize for any inconvenience this may have caused.
