Images from Lesson 5, starting on page 35

These images represent a design solution for a multi-function room. AutoCAD 2009's *Layer States* are employed to manage the three layout designs. The reader (prior to this exercise) drew the symbols and inserted them as *Blocks*. Some of the *Blocks* have a special *Layer* showing the required clearance, for that object, which can be turned off when not needed; this aids in the efficiency and accuracy related to the layout and design of the space.
