**Table of Contents**

Preface	i
Acknowledgements	i
About the Author	ii
Files for this Manual	ii
Table of Contents	iii
Introduction	vii
<b>Introduction to Mechanics Functionality</b>	<b>1</b>
Key Assumptions in FEA	1
Geometry	1
Material Properties	1
Mesh	2
Boundary Conditions	2
Elements Used in FEA	3
Review of Element Behavior and Geometric Classifications	3
Common Modeling and Element Types	3
Planar Simulation Modeling	4
Plane Stress	4
Plane Strain	5
Axisymmetric	5
Three Dimensional Simulation	5
Beam Elements	6
Shell Elements	6
Axisymmetric Modeling	7
Planar Symmetry	7
Solid Modeling	7
Special Elements	8
Spring Elements	8
Mass Elements	9
Basic Elements for the FEA Beginner	9
Useful FEA Terminology	11
Shape Function	12
<i>H</i> vs <i>P</i> Elements	12
Introduction Exercise	
<b>Mechanics Functionality in Integrated Mode</b>	<b>13</b>
Introduction	13
Mechanics Tools and Terminology	13
System of Units	13
World Coordinate System	15
Measures	15
Typical Finite Element Procedure	17
3-D Idealizations	17

Materials	18
Finite Element Mesh	20
Boundary Conditions	21
Analyses	23
Results	24
Mechanica Files	26
Exercise 1	
<b>Beam Elements</b>	31
Objectives	31
Introduction	31
Procedure	32
Start Pro/ENGINEER WILDFIRE	33
Create a part named: beam	33
Setting up in Pro/ENGINEER WILDFIRE for FEA Modeling	35
Creating a datum curve for beam assignment	35
Procedure in Pro/MECHANICA	36
Go to Pro/MECHANICA from Pro/ENGINEER	36
Beam Assignment	37
Beam Section	37
Beam Orientation	39
Beam Definition	40
Constraints	42
Loads	44
Generating Beam Elements	46
Set up and Run Analysis	47
Static Analysis	47
Running the Analysis	48
Analysis of Results	50
Approximate Finite Element Analysis Solution (Theory Warning)	53
Conclusion	59
Project 1	60
References	62
Exercise 2	
<b>Shell Elements Using a Plane Stress Model</b>	63
Introduction	63
Overview	63
Exact Solution	64
Procedure in Pro/MECHANICA	66
Shell Properties	67
Generating Elements	68
Loads and Constraints	70
Creating the Analyses	76
Running Analyses	78
Results	80
Project 2	87

Exercise 3

<b>Shell Elements Using Mid-Surface Compression</b>	89
Objectives	89
Introduction	89
Procedure	91
Start Pro/ENGINEER WILDFIRE	93
Open the Part Named: x_mbr	93
Open the Part Named: cab_skin.prt	96
Open the Assembly cab.asm	98
Boundary Conditions	99
Constraints	99
Loads	100
Assign Materials	103
The <i>Mesh</i> Myth Demystified	105
Creating the Mesh	108
Set up and Run Analysis	110
Notes on Debugging a Failed Mesh	113
A few more notes on Automeshing (AutoGEM) versus	
Manual Meshing	113
Notes on Convergence	114
Uncertainty	114
The Error Estimate	115
Convergence	115
How to determine the correct convergence level in	
Pro/MECHANICA	117
Convergence Types in Pro/MECHANICA	118
Results	120
Conclusion	125
Project 3	126
References	128

Exercise 4

<b>Boundary Conditions Regions</b>	129
Objectives	129
Introduction	129
Overview	130
Procedure	131
Start Pro/ENGINEER WILDFIRE	131
Open part: plate_regions.prt	131
Creating Regions	132
Shell Element Creation	132
Assign Materials	133
Boundary Conditions	135
Constraints	135
Loads	136

Meshing of the FEA Model	137
Set up and Run Analysis	139
Static Analysis	139
Results of Static Analysis	141
Conclusion	145
Project 4	145
 Exercise 5	
<b>Mass and Spring Elements in Dynamic Motion</b>	149
Objectives	149
Introduction	149
Modal (or Natural Frequency) Analysis	149
Dynamic Analysis	151
General	151
Frequency Response Analysis	151
Transient Response Analysis	153
Dynamic Time Analysis	154
Random Response Analysis	154
<b>Modal Analysis Exercise</b>	
<b>Using Pro/MECHANICA in Integrated Mode</b>	155
Introduction	155
Objectives	155
Overview of Exercise	155
Procedure	156
Setting Up the Model and the FEA Modeling	156
Pro/MECHANICA Procedure	157
Shell Creation	157
Part Materials	158
Setting Up User-Defined Measures	161
Mass Simulation	163
Spring Elements	166
Assign Boundary Conditions to the Model	171
Loads	171
Constraints	172
Creating the Dynamic Analyses (constrained)	173
Dynamic Analysis	174
Run the Analysis Dynamic_1	179
Frequency Results	180
Modal Analysis	180
Dynamic Frequency Analysis Results	183
Output Measures	183
Conclusion	186
Project 5	187
 <b>Conclusions</b>	191
