Before You Start 1

Notes on hands-on exercises and functionality of Simulation

Prerequisites

Selected terminology

1: Introduction 5

What is Finite Element Analysis?

Finite Element Analysis used by Design Engineers

Objectives of FEA for Design Engineers

What is SolidWorks Simulation?

Fundamental steps in an FEA project

Errors in FEA

A closer look at finite elements

What is calculated in FEA?

How to interpret FEA results

Units of measure

Using online help

Limitations of SolidWorks Simulation Professional

2: Static analysis of a plate 31

Using the SolidWorks Simulation interface

Linear static analysis with solid elements

Controlling discretization errors with the convergence process

Finding reaction forces

Presenting FEA results in a desired format

3: Static analysis of an L-bracket 71

Stress singularities

Differences between modeling errors and discretization errors

Using mesh controls

Analysis in different SolidWorks configurations

Nodal stresses, element stresses

4: Stress and frequency analyses of a pipe support **89**

Use of shell elements

Frequency analysis

Bearing load

5: Static analysis of a link **107**

Symmetry boundary conditions

Preventing rigid body motions

Limitations of the small displacement theory

6: Frequency analysis of a tuning fork and a plastic part **117**

Frequency analysis with and without supports

Rigid body modes

The role of supports in frequency analysis

Symmetric and anti-symmetric modes

7: Thermal analysis of a pipe connector and a heater **125**

Analogies between structural and thermal analysis

Steady state thermal analysis

Analysis of temperature distribution and heat flux

Thermal boundary conditions

Thermal stresses

Vector plots

8: Thermal analysis of a heat sink **143**

Analysis of an assembly

Global and local Contact/Gap conditions

Steady state thermal analysis

Transient thermal analysis

Thermal resistance layer

Use of section views in result plots

9: Static analysis of a hanger **159**

Global and local Contact conditions

Hierarchy of Contact conditions

10: Analysis of contact stress **173**

Contact conditions

Contact stress analysis

11: Thermal stress analysis of a bi-metal loop **183**

Thermal deformation and thermal stress analysis

Eliminating rigid body motions

Saving model in deformed shape

12: Buckling analysis of an I-beam **193**

Buckling analysis

Buckling load safety factor

Stress safety factor

13: Static analysis of a bracket using adaptive solution methods **201**

h-adaptive solution method

p-adaptive solution method

Comparison between h-elements and p-elements

14: Drop test **219**

Drop test analysis

Stress wave propagation

Direct time integration solution

15: Selected nonlinear problems **227**

Large displacement analysis

Analysis with shell elements

Membrane effects

Following and non-following load

Nonlinear material analysis

Residual stress

16: Mixed meshing problem **269**

Using solid and shell elements in the same mesh

Mixed mesh compatibility

Manual and automatic findings of contact sets

17: Analysis of a weldment using beam elements **277**

Different levels of idealization implemented in finite elements

Preparation of a SolidWorks model for analysis with beam elements

Beam elements and truss elements

Analysis of results using beam elements

Limitations of analysis with beam elements

18: Review of 2D problems **303**

Classification of finite elements

2D axi-symmetric element

2D plane stress element

2D plane strain element

19: Vibration Analysis - Modal Time History and Harmonic **327**

Modal Time History analysis (Time Response)

Harmonic analysis (Frequency Response)

Modal Superposition Method

Damping

20: Analysis of random vibration **357**

Random vibration

Power Spectral Density

RMS results

PSD results

Modal excitation

21: Miscellaneous topics **375**

Mesh quality
Solvers and solvers options
Displaying mesh in result plots
Automatic reports
E drawings
Non-uniform loads
Frequency analysis with pre-stress
Shrink fit analysis
Rigid connector
Pin connector
Bolt connector
Remote load/mass
Weld connector
Bearing connector
Circular symmetry
Strongly nonlinear problem
Terminology issues in the Finite Element Analysis

22: Implementation of FEA into the design process **427**

Verification and Validation of FEA results
FEA driven design process
FEA project management
FEA project checkpoints
FEA reports

23: Glossary of terms **445**

24: Resources available to FEA users **453**

25: List of exercises **455**
